Owl Pellet Activity

Possible Scenario

1. This activity can be done as individual work or pair work
2. Give each student an owl pellet, toothpicks, a piece of wax paper, and the template of vole skeletons
3. Ask students to sort the bones out and put them together on the template of vole skeletons.
4. Ask students “Is what they did a scientific investigation?”
5. Make it explicit to students that a scientific investigation starts from a question and just doing or manipulating some stuff does not mean a scientific investigation.
